

New Cohort Launch: What's Different This Term?

Discover the new features, enhancements, and opportunities awaiting students in our latest cohort.

A new term means a new cohort — and this one comes with more changes than usual. Based directly on feedback from the last few terms, we've rebuilt several core parts of the experience: how the AI tutor explains things, what career tracks are available, how much live human support you get, and how your certifications actually hold up once you're job-hunting.

Here's exactly what's different, whether you're returning for another term or joining Maieutic Edutech for the very first time.

None of these changes are cosmetic. Each one maps directly to a specific piece of feedback we heard repeatedly across the last several cohorts — from completion rates to how confidently graduates could point to a credential during interviews.

WHAT'S NEW — 01

AI Tutor 2.0: Sharper Explanations, New Voice Mode

The AI tutor has been rebuilt from the ground up this term. It now maintains context across an entire course instead of just a single session, so it remembers where you struggled last week and adjusts accordingly.

- **Voice mode:** ask questions out loud and get spoken explanations back — useful for reviewing on a commute or between classes.
- **Multi-step reasoning:** the tutor now shows its work for harder problems instead of just delivering a final answer.
- **Cross-course memory:** it connects concepts across different courses you're taking, instead of treating each one in isolation.
- **Confidence-aware pacing:** if you breeze through a topic, it speeds up; if you're clearly guessing, it slows down and re-explains before moving on.

Sharper Explanations, New Voice Mode

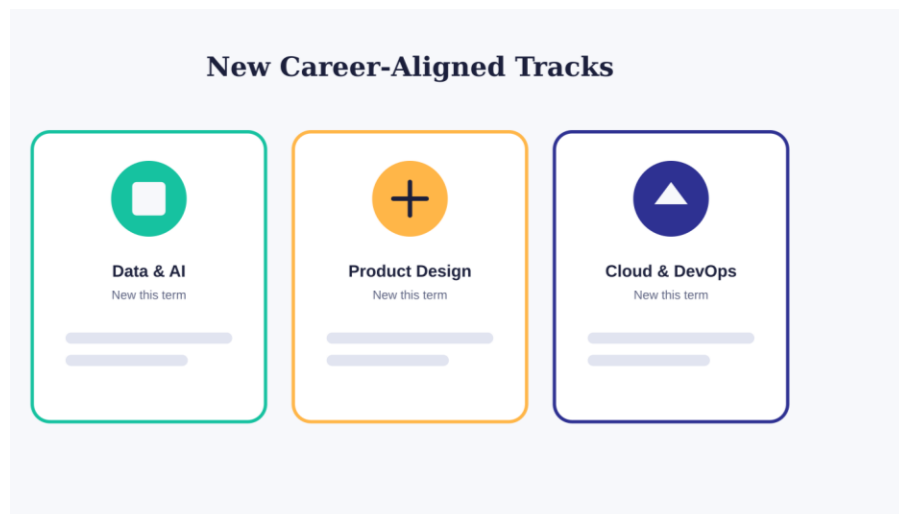

WHAT'S NEW — 02

Three Brand-New Career-Aligned Tracks

Based on demand from the last two cohorts, we've launched three new specialization tracks: **Data & AI**, **Product Design**, and **Cloud & DevOps**. Each one was built in direct consultation with hiring partners, so the skills map to real job postings rather than a generic curriculum.

What's included: a mapped sequence of courses, hands-on projects reviewed by mentors, and a capstone project you can point to directly in interviews.

Enrollment in any of the three new tracks is open to both new and returning students — you don't need to restart your existing progress to add one.

Three New Specializations to Choose From

"Built with hiring partners, not guessed at from a curriculum committee."

WHAT'S NEW — 03

Live Mentor Office Hours, Every Week

Previous cohorts only had access to async support — forum posts and email. This term, every student gets a standing weekly live session with an industry mentor, on top of the AI tutor.

- Small-group format, capped so you actually get airtime, not a lecture
- Recorded automatically if your time zone doesn't line up — nothing is missed
- Mentors are working professionals in the field you're studying, not generalist TAs

Real Mentors, Every Week

"Isolation, not difficulty, is usually what makes students quietly disappear."

Last Term	This Term
Async-only support	Weekly live mentor office hours
Study solo	Matched peer learning circles
PDF certificate	Blockchain-verified digital credential
App needs signal	Fully offline-capable app
Single-session AI tutor	AI Tutor 2.0 with cross-course memory

This Cohort, by the Numbers

- **92% completion rate** among students who were matched into a peer circle during the beta test, compared with 61% for solo-paced students in the prior term.
- **40+ mentors** onboarded across the three new specialization tracks, all currently working in the field they mentor in.
- **3 new hiring partners** consulted directly on the Data & AI, Product Design, and Cloud & DevOps curricula.
- **100% offline coverage** for core lessons and flashcard decks in the redesigned mobile app.

WHAT'S NEW — 04

Peer Learning Circles Replace Solo Study

Completion rates were the single biggest thing we wanted to fix this term. The fix: small peer circles of 5–6 students who move through the material together, with shared milestones and light accountability check-ins.

Why it matters: students studying in a circle finish course at meaningfully higher rates than those studying entirely solo — isolation, not difficulty, is usually what causes people to quietly drop off.

Small Cohorts, Shared Accountability

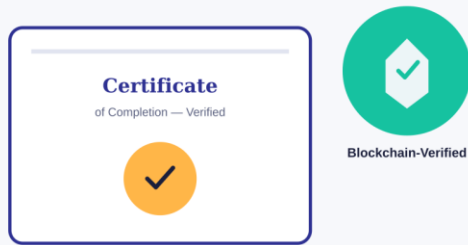

WHAT'S NEW — 05

Refreshed Certifications, Now Blockchain-Verified

Certificates from this cohort onward are issued with a verifiable digital credential attached, so employers can confirm authenticity directly instead of taking a PDF at face value.

- Shareable directly to LinkedIn with one click
- Includes a skills breakdown, not just a course title
- Old certificates remain valid — this only applies going forward

Refreshed Certifications & Badges

Credentials Employers Can Actually Verify

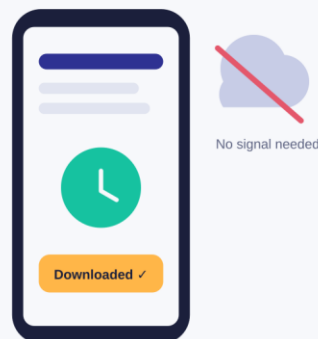

WHAT'S NEW — 06

The Mobile App Now Works Fully Offline

Previously, patchy internet meant a paused lesson. The redesigned mobile app now caches full lessons, quizzes, and flashcard decks locally, so a subway commute or a rural weekend doesn't cost you study time.

Why it matters: this was consistently the top-requested fix from students outside major cities — access shouldn't depend on signal strength.

Offline-Ready Mobile App

Learn Anywhere, Signal or Not

"The peer circle is the reason I actually finished this time — last term I just quietly stopped logging in." — a returning student, on the beta test of this cohort's changes"

Questions Students Are Already Asking

Do I have to switch tracks to get the new features? No — AI Tutor 2.0, office hours, peer circles, and the offline app apply to every track automatically, including ones you were already enrolled in.

Is there an extra cost for office hours or peer circles? No, both are included in standard enrollment for this cohort at no additional charge.

What happens to my old certificate if I already graduated? It stays fully valid. The new verification layer applies to certificates issued from this cohort onward, not retroactively.

Can I switch peer circles if the schedule doesn't work? Yes — you can request a reassignment during the first week of the term with no penalty, though most students find their default match works fine.

Enrolment Details for This Cohort

- **Enrollment window:** open now through the start of the term — spots in mentor-led tracks are capped, so early enrollment matters more than in past terms.
- **Pricing:** standard tuition is unchanged; office hours, peer circles, and the offline app are included at no extra cost.
- **Returning students:** all new features apply automatically to your existing enrollment — there is nothing you need to re-purchase or re-enrol in.

Mentor Spotlight: Who You'll Actually Meet

The mentors joining this cohort aren't teaching assistants reading from a script — they're practitioners currently working in the fields they mentor in, brought on specifically for the new career-aligned tracks.

- **Data & AI:** mentors currently working as data scientists and ML engineers at mid-size and enterprise companies.
- **Product Design:** mentors who have shipped consumer products used by millions, now reviewing student portfolios directly.
- **Cloud & DevOps:** mentors holding active certifications across major cloud providers, running live infrastructure debugging sessions.

Every mentor session is optional to attend live and always available as a recording, so no student is penalized for a time zone mismatch.

How to Get Started This Term

If you're a returning student, all the above is already live on your account — no action needed beyond logging in. If you're new:

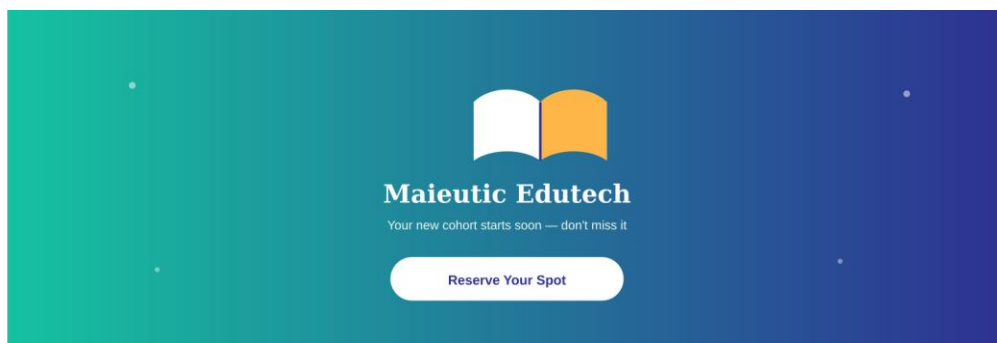

1. **Pick a track.** Choose one of the existing programs or one of the three new specializations.

2. **Get matched to a peer circle.** This happens automatically in your first week based on your schedule and goals.
3. **Attend your first office hours session.** It's on the calendar as soon as you enroll.
4. **Download the app.** Set your offline downloads before you need them, not after you lose signal.

Where Maieutic Edutech Fits In

Every change this term came from the same place: students told us where the experience was falling short, and we rebuilt that specific part rather than adding features for their own sake. We'll keep doing this every term — the next round of changes is already being shaped by what this cohort tells us.
